MACOM Extends GaN Leadership With Industry's First Dual Source Supply Chain

LOWELL, Mass., July 22, 2013 (GLOBE NEWSWIRE) -- M/A-COM Technology Solutions Inc. (MACOM), a leading supplier of high performance RF, microwave, and millimeter wave products, today announced that it has entered into a technology transfer and licensing agreement with Global Communications Semiconductors, LLC, (GCS) for its 0.5 um, 0.25 um and 0.15 um GaN technologies to be ported to MACOM's Lowell, Massachusetts facility. The agreement establishes MACOM as the only company in the industry that can provide customers with true copy exact dual sourcing for high performance GaN devices. This industry first GaN sourcing strategy provides customers with surety of supply for enabling GaN technology adoption into mainstream programs.

Today's system challenges are pushing beyond current performance boundaries, and demand higher power, higher efficiency, and higher linearity performance over ever increasing bandwidth requirements. GaN is the next disruptive semiconductor technology allowing solution providers to dramatically increase system performance while reducing size, weight and power consumption (SWAP) across a variety of functions and applications.

The 0.5, 0.25 and 0.15 um GaN process technologies enable device performance up to 40 GHz with high voltage, high power density and high efficiency operation. These technologies drive leading edge performance across a broad range of functions and applications.

The addition of these new GaN processes to MACOM's domestic semiconductor facility will further enhance the company's strong semiconductor technology base.

"We are pleased to be working with a leader like MACOM, who understands what is needed to reduce GaN to commercially viable solutions," said Brian Ann, CEO of GCS. "Our portfolio of 0.5um to 0.15um GaN technologies provide leadership performance across a vast array of RF, microwave and millimeter wave applications."

Specific terms of the agreement were not disclosed.

ABOUT MACOM

M/A-COM Technology Solutions (www.macomtech.com) is a leading supplier of high performance RF, microwave, and millimeter wave products that enable next-generation Internet and modern battlefield applications. Recognized for its broad catalog portfolio of technologies and products, MACOM serves diverse markets, including CATV, wireless and optical communications infrastructure, satellite, radar, automotive, industrial, medical, and mobile devices. A pillar of the RF and microwave industry, we thrive

on more than 60 years of solving our customers' most complex problems.

About Global Communication Semiconductors

GCS is an ISO 9001:2008 certified premier pure-play compound semiconductor foundry in Southern California with a worldwide sales network. GCS' business objective is to supply high performance, high quality, specialty semiconductor devices, integrated circuits and solutions to the wireless, telecommunications and fiber optical communications markets. To learn more about GCS, please visit <http://www.gcsincorp.com/>
